

Hypothetical Investment Portfolio

What Is This Portfolio?

This is a hypothetical INR 1,00,000 portfolio designed for a young Indian investor with a medium-to-high risk appetite and a 3-5 year time horizon. It spreads money across four asset classes: Indian stocks, ETFs, crypto, and cash. The goal is to balance growth potential with risk management.

Asset Allocation at a Glance

Asset Class	Allocation	Amount (INR)	Risk Level	Expected Return
Indian Stocks (4 picks)	55%	INR 55,000	Medium-High	12-18% p.a.
ETFs (3 picks)	25%	INR 25,000	Low-Medium	10-14% p.a.
Crypto (BTC + ETH)	10%	INR 10,000	Very High	Variable
Cash / Liquid Fund	10%	INR 10,000	Very Low	6-7% p.a.
TOTAL	100%	INR 1,00,000	-	~13-15% blended

Individual holding amounts — Stocks (blue), ETFs (green), Crypto (gold), Cash (grey)

Why These Choices? (Rationale)

Indian Stocks - INR 55,000 (55%)

Stocks form the core growth engine of this portfolio. All 4 picks are large-cap, highly liquid NSE-listed companies — suitable for a beginner who wants solid growth without excessive volatility.

Stock	Amount	Why This Pick?
Reliance Industries (RELIANCE)	INR 15,000	India's biggest company - diversified across telecom, retail, O&G, and green energy. A bet on India's overall growth story.
Infosys (INFY)	INR 12,000	Top IT exporter earning in USD. Pays consistent dividends. Benefits from global digital transformation spending.
HDFC Bank (HDFCBANK)	INR 15,000	India's best private bank. Very low bad loans, strong consistent profits, and rides India's credit growth boom.
Tata Motors (TATAMOTORS)	INR 13,000	EV transition story via Jaguar Land Rover and Indian EVs. Higher risk but strong upside as global EV adoption rises.

ETFs - INR 25,000 (25%)

ETFs are like ready-made baskets of investments. You buy one unit and instantly own a slice of many companies or assets. They have very low fees and are ideal for beginners seeking diversification.

ETF	Amount	Why This ETF?
Nippon Nifty 50 BeES	INR 10,000	Tracks India's top 50 companies. If India grows, this grows. Ultra-low cost with expense ratio around 0.04%.
Mirae FANG+ ETF (MAFANG)	INR 8,000	Invests in global tech giants (Apple, Google, Meta, Amazon). Adds international and USD exposure to the portfolio.
Kotak Gold ETF (KOTAKGOLD)	INR 7,000	Holds digital gold. Acts as a hedge against inflation and rupee depreciation. Gold typically moves opposite to stocks.

Crypto - INR 10,000 (10%)

Crypto is speculative and extremely volatile. INR 10,000 (10%) is the maximum recommended for a beginner. The potential for high returns is real, but so is the risk of losing the entire amount.

Crypto	Amount	Why Include It?
Bitcoin (BTC)	INR 7,000	Digital gold. Institutional adoption rising with US Bitcoin ETF approvals in 2024. Most credible long-term crypto store of value.
Ethereum (ETH)	INR 3,000	Powers DeFi and Web3. Eco-friendly Proof-of-Stake upgrade. Core infrastructure of the decentralised internet.

Figure 3 - Risk vs Return Map

Bubble size = allocation weight. Higher = higher expected return. Further right = higher risk.

Three Core Principles Behind This Portfolio

1. DIVERSIFICATION

Money is spread across 4 different asset classes so one bad investment does not ruin everything.

2. LIQUIDITY

Most holdings (stocks + ETFs) can be sold within 1 working day. Cash is kept for emergencies.

3. GROWTH + SAFETY BALANCE

80% in growth assets (stocks + ETFs), 10% high-risk speculation (crypto), 10% safe (cash).
