

INDIAN STOCK MARKET ANALYSIS REPORT

L&T | BHEL | Power Grid Corporation of India

1. Introduction

This report provides a clear and easy-to-understand analysis of three major Indian infrastructure and energy stocks: Larsen & Toubro (L&T), Bharat Heavy Electricals Ltd (BHEL), and Power Grid Corporation of India. All three benefit from India's infrastructure and energy investment cycle.

We examine each across four key parameters:

- Price Trends — How the stock has moved over the past year
- P/E Ratio — Whether the stock appears cheap or expensive
- Market Capitalisation — The total market size of the company
- Recent News & Performance — What's happening right now

2. Quick Comparison Snapshot (June 2026)

Metric	L&T	BHEL	Power Grid
Current Price (₹)	~4,076	~409	~291
52-Week High (₹)	4,440	424.90	324.95
52-Week Low (₹)	3,288	205.12	250.00
P/E Ratio	~29–35x	~92x	~17x
P/B Ratio	~5.1x	~5.3x	~2.7x
Market Cap (₹ Cr)	~5,60,000	~1,45,000	~2,70,000
1-Year Return	+10.7%	+60.4%	-1.4%
Dividend Yield	~0.97%	~0.2%	~4.2%
Sector	Infrastructure / EPC	Heavy Eng. / PSU	Power Transmission

3. Visual Analysis — Charts

3.1 Market Capitalisation Comparison

Chart 1 — Market Cap Comparison (₹ Crore) | June 2026

L&T dominates with a market cap more than double that of Power Grid, and almost 4x that of BHEL. Size reflects L&T's diversified conglomerate nature vs. the more focused government-owned enterprises.

3.2 P/E Ratio — Cheap or Expensive?

Chart 2 — P/E Ratio Comparison | June 2026

Power Grid is the cheapest at ~17x — fitting for a regulated utility with stable, predictable income. L&T trades at a moderate ~32x, reflecting growth expectations. BHEL's sky-high ~92x P/E is a 'recovery bet' — the market is pricing in explosive future earnings growth, not current earnings.

3.3 One-Year Stock Return

Chart 3 — 1-Year Price Return (%) | June 2025 to June 2026

BHEL has been the clear winner with a 60%+ return, driven by record profits and a massive order book. L&T delivered a solid 10.7%. Power Grid was essentially flat (-1.4%) — but delivered consistent dividend income of ~4.2% on top, making total returns more respectable.

3.4 52-Week Price Range

Chart 4 — 52-Week High / Low with Current Price | June 2026

This chart shows the full year range for each stock and where the current price sits within it. BHEL and L&T are trading near their highs, while Power Grid is closer to the middle of its range — suggesting relatively more room to recover for Power Grid.

3.5 Approximate 1-Year Price Trend (All Three Stocks)

Chart 5 — Approximate Monthly Price Trend | June 2025 – June 2026

Note: L&T uses the right Y-axis (₹3,000–4,800), Power Grid uses the far-right axis (₹200–400), and BHEL uses the left axis (₹150–500). BHEL's near-vertical rise from mid-2025 stands out clearly, while Power Grid remained largely stable and L&T showed gradual appreciation.

3.6 FY2025-26 Revenue vs Net Profit

Chart 6 — FY26 Revenue (solid) vs Net Profit (hatched) in ₹ Crore

L&T's scale is unmatched in revenue (~₹2.4 lakh Crore consolidated). Power Grid and BHEL are smaller in revenue but Power Grid punches far above its weight in profitability — its ₹15,632 Cr net profit nearly matches L&T's despite much lower revenue, thanks to its high-margin regulated business model.

4. L&T — Larsen & Toubro (NSE: LT)

India's largest engineering conglomerate (est. 1938). Spans EPC construction, IT, defence manufacturing and financial services across 50+ countries.

Key Financials & Metrics

Parameter	Value
Current Price	₹4,076
52-Week Range	₹3,288 – ₹4,440
Market Cap	~₹5,60,000 Crore
P/E Ratio	~29–35x
EPS (FY26)	₹116.93
1-Year Return	+10.7%
Dividend Yield	~0.97%

Recent Highlights

- Won largest-ever domestic metals order from JSW Steel (₹10,000–15,000 Cr)
- Defence partnership with General Atomics (USA) for MALE drone manufacturing in India
- Mutual Fund holding at 20.5% — high institutional confidence
- 81st AGM scheduled June 5, 2026; new board composition underway

Verdict: Premium quality infrastructure franchise. Best for long-term growth investors. Priced fairly for its calibre.

5. BHEL — Bharat Heavy Electricals (NSE: BHEL)

India's largest government-owned heavy engineering company (est. 1964). Makes turbines, boilers, and power equipment for thermal, hydro and renewable energy plants.

Key Financials & Metrics

Parameter	Value
Current Price	₹409
52-Week Range	₹205 – ₹424.90
Market Cap	~₹1,45,000 Crore

P/E Ratio	~92x (recovery priced in)
FY26 Revenue	₹33,782 Crore (+19% YoY)
Q4 FY26 Profit Growth	+156% YoY
Order Book	₹2,40,000 Crore

Recent Highlights

- All-time high of ₹424.90 hit on May 14, 2026 — spectacular turnaround
- Q4 FY26 net profit surged 156% year-on-year — among the best results in a decade
- BSE Power Index rose 24% in 2 months; BHEL was a top beneficiary
- Potential new order of ₹8,000–10,000 Crore in pipeline
- Yadadri Thermal Power Station (4,000 MW) 3rd unit commissioned

Verdict: High-risk, high-reward PSU turnaround. Best for aggressive investors with 2–3 year outlook. Volatility expected.

6. Power Grid Corporation (NSE: POWERGRID)

India's largest electricity transmission utility, owned by Govt. of India (est. 1989). Carries high-voltage power across the national grid. Headquartered in Gurugram.

Key Financials & Metrics

Parameter	Value
Current Price	₹291
52-Week Range	₹250 – ₹324.95
Market Cap	~₹2,70,000 Crore
P/E Ratio	~17x
FY26 Net Profit	₹15,632 Crore (+9.7% YoY)
1-Year Return	-1.4% price + 4.2% dividend
Dividend Yield	~4.2%

Recent Highlights

- Q4 FY26 net profit rose 9.74% to ₹4,546 Crore — steady and reliable
- Final dividend of ₹1.25/share approved; quarterly dividend ₹3.25/share already paid
- FY27 CapEx target set at ₹37,000 Crore — major grid expansion ahead
- 99.8% system availability — world-class reliability
- 765kV digital substation commissioned — cutting-edge technology

Verdict: The safest of three. Dividend compounder, predictable income, low P/E. Ideal for conservative and income-focused investors.

7. Conclusion & Investment Takeaway

All three companies represent different facets of India's infrastructure and energy boom:

Stock	Best For	Key Strength
L&T	Long-term growth investors	Diversified conglomerate, defence & infra tailwinds
BHEL	Aggressive / high risk appetite	PSU turnaround, 156% profit growth, ₹2.4L Cr order book
Power Grid	Conservative / income-seeking	4.2% dividend, lowest P/E, regulated stable income

India's infrastructure super-cycle — powered by government capex in roads, railways, power, and defence — is the common thread. The key difference is speed vs. safety: BHEL is the sprinter, L&T is the marathon runner, Power Grid is the steady walker.
